

Gentlemen, Again I'm writing to express my deep concern for the interference potential of the BPL system. I'm a licensed Amateur Extra class operator and have worked as an engineer in communications related industries for over 30 years. The main thrust of my engineering expertise has been in the field of RFI. BPL as envisaged will spell the end of HF communications not only for Amateur Radio, but virtually all users of the HF spectrum. Interference levels will be so intolerable as to exclude reception of only the strongest signals. Additionally the system will be extremely susceptible to interference from licensed services. The only way to make the system at all compatible (since it's approval is a foregone conclusion) is to develop rule-making to notch Amateur and other services from the BPL spectrum.

Sincerely, Jeffrey Stricker W9GY
